

Leader Electronics Corporation Introduces the LV 5330 Multi Waveform  
Monitor at IBC2008

YOKOHAMA, Japan—(BUSINESS WIRE)—LEADER ELECTRONICS CORP. (JASDAQ 6867) today announced that it will introduce its new product, the LV 5330 Multi Waveform Monitor, to the European market at IBC2008.

The LV 5330 is a compact and light multi waveform monitor equipped with the newly developed CINELITE II feature, which consists of CINELITE and CINEZONE. With the CINELITE feature, you can measure brightness at one specified point on the picture display, just like with a spot meter. The CINEZONE feature maps colors to the picture display based on luminance level, enabling quick confirmation of the luminance distribution. In addition, the LV 5330 comes equipped with waveform monitor, vectorscope, audio level display, error detection and analysis, and viewfinder features.

Booth: Stand Number 10.F38

#### About Leader Electronics

Leader Electronics selects and focuses on the professional video area of digital TV, on specialized portions of the consumer electronics area, as well as on the optical disk area for DVD/CDs and on the flat panel display area for LCD/PDP in order to achieve effective management. The evolution of electronics is endless and it is the most important technology as there can be no industry without the use of electronics. With experience and history of 53 years, we are committed to being a leading company in the area of test instrumentation so that we can always develop new products that apply to new electronics applications.
