

Analog component signal output unit

The various test instruments are required for testing the TV broadcasting systems. Therefore, the dedicated instrument suitable for each format is required for monitoring the system.

Leader Electronics Corporation (Yokohama, Japan. Sigehiko Hirota, president) has supplied the LV 5800 MULTI MONITOR main frame. In response to market demands, the LV 58SER21 plug-in unit is newly introduced to output the analog component signals.

Since the signals in Y, PB, PR, and GBR formats are output by installing the 58SER21 to the LV 5800, the LV 5800 can be used when combined with the analog picture monitor.

About Leader Electronics

Leader Electronics selects and focuses on the professional video area of digital TV, on specialized portions of the consumer electronics area, as well as on the optical disk area for DVD/CDs and on the flat panel display area for LCD/PDP in order to achieve effective management. The evolution of electronics is endless and it is the most important technology as there can be no industry without the use of electronics. With experience and history of 54 years, we are committed to being a leading company in the area of test instrumentation so that we can always develop new products that apply to new electronics applications.
