

Leader Electronics Corp. introduces LV 7800 functional Rasterizer in the NAB Show 2009

The LV 7800 is the functional rasterizer. Featuring the rasterizer capability, this model provides almost the same capabilities as LV 5800 Waveform monitor.

The LV 7800 platform satisfies user's various requirements when combined with the optional boards. The rasterizer capability is suitable for monitoring the HD-SDI signals, composite signals, and MPEG2-TS signals.

Since the DVI-I connector is provided as standard for connecting the monitor, the wide monitor, e.g., 16:9 (1366x768) or 15:9 (1280x768) can be connected.

In addition to such basic functions, the speaker can optionally be installed.

About Leader Electronics

Leader Electronics selects and focuses on the professional video area of digital TV, on specialized portions of the consumer electronics area, as well as on the optical disk area for DVD/CDs and on the flat panel display area for LCD/PDP in order to achieve effective management. The evolution of electronics is endless and it is the most important technology as there can be no industry without the use of electronics. With experience and history of 55 years, we are committed to being a leading company in the area of test instrumentation so that we can always develop new products that apply to new electronics applications.
