

Leader introduces new Rasterizer

The LV 7380 Rasterizer is designed under a concept of a simple, compact, and lightweight. The 1U rack sized this instrument, a depth is reduced by about 40% (250 mm) compared with the previous model. Therefore, this model contributes to reduce the environmental problems to which importance increases.

The LV 7380 Rasterizer newly provides the squeeze function applicable to a wide monitor. The aspect ratio of 16:10/16:9 or 4:3 can be selected.

This model provides such basic functions as the waveform monitor, vectorscope, picture monitor, sound measurement capability, and SDI status detector.

With two video input systems, this model can simultaneously display two video signals for monitoring.

The eye pattern display function is optionally available.

[Usage]

This model is suitable for monitoring the video waveform in the wide variety of markets such as TV broadcasting, post-production, and digital cinema producer as well as video equipment manufacturers.

[Note]

The Rasterizer is a waveform monitor to display the video waveform on the external monitor (e.g., P.C. monitor) rather than the conventional video waveform monitor.

About Leader Electronics

Leader Electronics selects and focuses on the professional video area of digital TV, on specialized portions of the consumer electronics area, as well as on the optical disk area for DVD/CDs and on the flat panel display area for LCD/PDP in order to achieve effective management. The evolution of electronics is endless and it is the most important technology as there can be no industry without the use of electronics. With experience and history of 55 years, we are committed to being a leading company in the area of test instrumentation so that we can always develop new products that apply to new electronics applications.
