## LV 7770 / LV 7770-01 MULTI External display CINELITE Advanced Display RASTERIZER NEW Synchronizes the markers

Multa Multo Malto Statos

LEADER

## **Multi Rasterizer**

The LV 7770 is a rasterizer that supports 3G-SDI, HD dual link, HD-SDI, and SD-SDI signals.

It has a variety of features, including simultaneous monitoring of two SDI input signals, frame capturing, lip sync measurement, and ANC data analysis.

## FEATURES

• 3G-SDI Compatible 2-Channel Simultaneous Display (LV 5770SER08 and LV 5770SER09)

The LV 7770 is equipped with a pair of SDI input connectors that support 3G-SDI, HD dual link, HD-SDI, and SD-SDI signals. The two input signals can be displayed simultaneously. Even when one of the input signals is not being displayed, the LV 7770 still monitors the undisplayed signal for errors. In addition, the LV 7770 is equipped with SDI output connectors that can generate serial reclocked SDI signals from the input SDI signals. The A/B output connector generates the reclocked signal of the SDI signal applied to channel A or channel B. The output that is generated from this connector is switched between the two channels whenever an input key (A or B) is pressed. • Wide Variety of Display Formats (LV 5770SER08 and LV 5770SER09)

In the video signal waveform display, vector display, and picture display, the LV 7770 can display up to two input SDI signals on top of each other or side by side. This makes it suitable for adjusting the gain and black balance values of two video signals. In the video signal waveform and vector displays, the LV 7770 can make different input channels easier to see by displaying them using different colors.

#### Capture Feature

A screen capture feature that captures the screen as still images, a frame capture feature that captures single frames of SDI signals, and an error capture feature that automatically detects and captures error frames are available.

Not only can captured data be displayed by the LV 7770, but it can also be compared with an input signal or saved to a USB memory device. It is easy to view the saved data on a PC

#### XGA Resolution DVI-I Output

The measurement display has XGA resolution (an effective resolution of 1024 x768) and can be output from the DVI-I connector, which supports single-link TMDS. The aspect ratio can be switched between 4:3, 16:9, and 16:10. (The display must have a resolution conversion feature.)

#### Picture Monitor Output (LV 5770SER08 and LV 5770SER09)

The input SDI signal can be generated as an 8-bit signal. Regardless of the SDI input signal, the output format can be set to YCBCR 4:2:2, YCBCR 4:4:4, or RGB 4.4.4

#### • 3D Assist Display (LV 5770SER08 and LV 5770SER09)

3D video signals can be evaluated by applying the video signal for the left eye to channel A and the video signal for the right eye to channel B. The available picture display formats are anaglyph, convergence, overlay, wipe, checker, and flicker

#### Digital Audio I/O

An external digital audio signal can be displayed in addition to the embedded audio. The eight I/O channels of the four connectors can be switched between input and output. Therefore, the LV 7770 can also be used to extract and transmit the embedded audio's digital audio. Also, when the 16-channel digital audio I/O option (LV 7770 OP70) is installed in the LV 7770, the number of I/O connectors can be expanded to 8 connectors with 16 channels.(To measure embedded audio, the LV 7770 must have the LV 5770SER08 or LV 5770SER09 installed.)

• With Loudness Measurement Function (for 2 Signals)

#### Standard-Equipped CINELITE II / CINELITE Advanced

The CINELITE feature makes it easy to manage the levels of specific points on the picture display. This is useful for adjusting the gain of multiple cameras through the use of the same reference point. The CINEZONE feature makes it possible to check the luminance distribution of the whole picture display at a alance.

#### • SDI Signal Data Analysis Feature (LV 5770SER08 and LV 5770SER09) On the status display, SDI signal transmission errors and various errors related to the embedded audio signal and ancillary data can be detected. In addition, the LV 7770 has event log, data dump, and external sync signal and SDI signal phase difference display features for analyzing SDI signals. Ancillary data is displayed along with the embedded line numbers and numbers of the corresponding standards in a list. This makes it possible to display detailed analy-202

• Timecode Display (LV 5770SER08 and LV 5770SER09)

The LTC and VITC that are embedded in an SDI signal and the D-VITC that is embedded in an SD-SDI signal can be displayed. The timecode can also be used for time stamps in the event log.

• Superimposing of English Closed Captions (LV 5770SER08 and LV 5770SER09)

The English closed captions (EIA-608, EIA-708, or VBI) that are embedded in an SDI signal can be superimposed over the image on the picture screen.

• External Control Connectors The LV 7770 has two external control connectors: an Ethernet port and a remote control connector.

By connecting the Ethernet interface to a PC, you can control the LV 7770 remotely over TELNET, transfer files over FTP, control the LV 7770 remotely and detect errors over SNMP, and control the LV 7770 over HTTP. You can also connect to the separately-sold LV 7770-01 (REMOTE CONTROLLER). (You cannot use TELNET and the LV 7770-01 at the same time.)

The remote control connector can be used to load presets, switch the input signal, and transmit errors.

#### LV 5770SER08 SDI INPUT (Option)

SDI input(The LV 5770SER08 and LV 5770SER09 cannot be installed in the instrument at the same time.)

#### LV 5770SER09 SDI INPUT / EYE (Option)

In addition to the LV 5770SER08 features, eye patterns can also be displayed.(The eye pattern display can be used on one of the two input SDI signals that you select.)

LV 5770SER03A TRI SYNC / COMPOSITE NTSC/PAL (Option) Tri-level sync and composite input.

#### LV 5770SER42 ANALOG AUDIO (Option)

Up to 8 channels of analog audio are supported.

#### V 7770 OP70 16CH DIGITAL AUDIO ADAPTER (Option) Up to 16 channels of digital audio are supported.

#### Dolby Option

The addition of the Dolby option enables the LV 7770 to decode and display the Dolby E or Dolby Digital signals that are compressed in embedded audio or digital audio signals.

(Dolby is a trademark of Dolby Laboratories)

## LV 5770 / LV 7770 Platform Options

#### LV 5770SER08 SDI INPUT/LV 5770SER09 SDI INPUT/EYE

## **FEATURES**

#### • Two-Channel Simultaneous Display

The LV 5770 is equipped with a pair of SDI input connectors that support 3G-SDI, HD dual link, HD-SDI, and SD-SDI signals. The two input signals can be displayed simultaneously. Even when one of the input signals is not being displayed, the LV 5770 still monitors the undisplayed signal for errors. In addition, the LV 5770 is equipped with SDI output connectors that can generate serial reclocked SDI signals from the input SDI signals. The A/B output connector generates the reclocked signal of the SDI signal applied to channel A or channel B. The output that is generated from this connector is switched between the two channels whenever an input key (A or B) is pressed.

#### Rich Assortment of Display Features

Not only does the LV 5770 have essential displays for video signal quality monitoring, such as a video signal waveform display and a vectorscope display, it also has a rich assortment of other display features such as a picture display, 5-bar display, and status display.

#### Wide Variety of Display Formats

In the video signal waveform display, vectorscope display, and picture display, the LV 5770 can display up to two input SDI signals on top of each other or side by side. This makes it suitable for adjusting the gain and black balance values of two video signals. In the video signal waveform and vectorscope displays, the LV 5770 can make different input channels easier to see by displaying them using different colors.

• Extremely Flexible Display Layouts (When optional units are installed) The 1-screen display feature can be used to show each of the different displays on a single screen, or the 4-screen multi display feature can be used to divide the screen into four areas with a different display shown in each area. The video signal waveform display picture display audio level meter display, and histogram display can be shown on the 1-screen display.

#### Frame Capture and Screen Capture Features

The LV 5770 is equipped with a frame capture feature, which captures single frames of an SDI signal. Captured frame data can be displayed as still-image data on the video signal waveform, vectorscope, and picture displays. In addition, this data can be saved to a USB memory device.

The LV 5770 is also equipped with a screen capture feature, which captures the entire display as still-image data.

#### Picture Monitor Output

The input SDI signal can be generated as an 8-bit signal. Regardless of the SDI input signal, the output format can be set to  $YC_BC_R4:2:2$ ,  $YC_BC_R4:4:4$ , or RGB4:4:4. The signal can also be generated in 8 bits, 10 bits, or 12 bits.

#### SDI Signal Data Analysis Feature

On the status display, SDI signal transmission errors and various errors related to the embedded audio signal and ancillary data can be detected. The LV 5770 has event log, data dump, and external sync signal and SDI signal phase difference display features for analyzing SDI signals. Ancillary data can be displayed along with the embedded line numbers and numbers of the corresponding standards in a list. A variety of detailed ancillary data analyses can be displayed.

#### • Timecode Display

The LV 5770 can display the LTC or VITC timecode that is embedded in an SDI signal and the D-VITC timecode of an SD-SDI signal. The timecode can also be used as the time stamp in the event log.

Superimposing Closed Caption Data

The closed caption data (EIA-608, EIA-708, VBI) that is embedded in an SDI signal can be superimposed on the picture display.

#### Standard-Equipped CINELITE II

The CINELITE feature makes it easy to manage the levels of specific points on the picture display. This is useful for adjusting thegain of multiple cameras through the use of the same referencepoint. The CINEZONE feature makes it possible to check theluminance distribution of the whole picture display at a glance.

**CINELITE** Display

CINEZONE Display

#### • 3D Assist Option

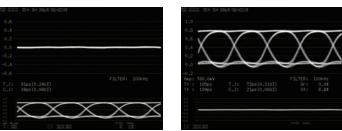

3D video signals can be evaluated by applying the video signal for the left eye to channel A and the video signal for the right eye tochannel B. The available picture display formats are anaglyph, con-vergence, overlay, and wipe.

## LV 5770SER09

#### • Eye Pattern and Jitter Measurement Display

The LV 5770 can display the eye pattern and jitter waveforms of 3G-SDI, HD dual link, HD-SDI, and SD-SDI signals.

An eye pattern's amplitude, rise time, fall time, timing jitter, current jitter, overshoot of the rising edge, and overshoot of the falling edge can be measured automatically.

Eye Pattern and Jitter Display (LV 5770SER09 installed)

Main Display Features	
Input	SDI input
Input Mode	Single input mode and simul mode
	(Only single input mode is available for HD dual
	link signals or when the composite option is
	installed.)
Single Input Mode	Displays a single input signal
Simul Mode	Displays up to two input SDI signals simultane-
	ously
3G-SDI 2 Mapping Mode	Splits a 3G-SDI signal into two HD-SDI signals
Simul Mode Dianter From	and displays them simultaneously
Simul Mode Display Format	Mixed, tiled, aligned (differs depending on the dis-
3G-SDI 2 Mapping Mode D	played contents)
Sa-obi z mapping mode L	The same as the simul mode display format
Mixed Display	Two input signals are displayed on top of each
	other.
Tiled Display	Two input signals are displayed in separate areas.
Aligned Display	Two input signals are displayed side by side.
Display Size	1-screen display, 2-screen display, 4-screen display
1-Screen Display	Displays a single, large screen (the thumbnail dis-
	play can be turned on and off)
2-Screen Display	Splits the display into two screens (left and right)
4-Screen Display	Splits the display into four screens
Waveform Display	
Simul Mode Display Format	Mixed, aligned
Waveform Operations	
Display Mode	
Overlay	Displays component signals overlaid
Parade Disabis subserved	Displays component signals side by side
Blanking Interval	H and V blanking periods can be masked.
RGB Conversion	Converts a Y,CB,CR signal into an RGB signal
Peoudo Composite Disclass	and displays the result
Pseudo-Composite Display	Digitally converts component signals into com- posite signals and displays the result
Channel Mapping	On the RGB conversion displays the result
	set to GBR order or RGB order.
Line Select	Displays the selected line
Display Colors	Seven colors to choose from; a different color for
	each input channel
Vertical Axis	
Gain	x1 or x5
Variable Gain	x0.2 to x2.0
Amplitude Accuracy	±0.5 %
HD-SDI	
Y Signal	±0.5 % for 1 to 30 MHz
CBCR Signal	±0.5 % for 0.5 to 15 MHz
Low-Pass Attenuation	≥ 20 dB (at 20 MHz)
SD-SDI V Signal	10.5.9/ for 1 to 5.75 MU
Y Signal C₀C₀ Signal	±0.5 % for 1 to 5.75 MHz ±0.5 % for 0.5 to 2.75 MHz
Low-Pass Attenuation	
Horizontal Axis	
Line Display	x1, x10, x20, ACTIVE, or BLANK
Field Display	x1, x20, or x40
Cursor Measurement	
Composition	Horizontal Cursors: 2 (REF and DELTA)
	Vertical Cursors: 2 (REF and DELTA)
Amplitude Measurement	
Time Measurement	Second display
Frequency Display	Computes and displays the frequency with the
	length of one period set to the time between two
Scale	cursors
	% scale, V scale, decimal scale, hexadecimal
Types	% scale, v scale, decimal scale, nexadecimal scale
Display Colors	Seven colors to choose from
Thumbnail Display	Picture, audio level meter (when an LV
	5770SER41/43 is installed)
Jactorogone Disalau	
Vectorscope Display	Mixed tiled
Simul Mode Display Format Display Colors	Mixed, tiled Seven colors to choose from; a different color for
	each input channel
Blanking Interval	Masked(*)
Pseudo-Composite Display	
i secto somposite Display	posite signals and displays the result
Line Select	Displays the selected line
Gain	x1, x5, IQ-MAG
Variable Gain	x0.2 to x2.0
Amplitudo Acourcov	

Amplitude Accuracy

Scale

±0.5 %

Types	ITU-R BT.601, ITU-R BT.709, AUTO
Color Bar Saturation	75 %, 100 % Show or hide
Display Colors	Seven colors to choose from
Thumbnail Display	Picture, audio level meter (when an LV
	5770SER41 is installed), histogram
	* On the multi-screen display, the blanking period depends on the video signal waveform display's
	blanking display settings.
5-Bar Display	
Simul Mode Display Format	Tiled only
Function	Converts an SDI signal into Y, R, G, B, and composite values and then displays the five peak levels
Scale	mV, %
Error Level	Based on the gamut error, composite gamut
Line Select	error, and luminance error thresholds Displays the selected line
Thumbnail Display	Picture, audio level meter (when an LV
	5770SER41/43 is installed)
Picture Display	Mixed tiled
Simul Mode Display Format Quantization	Mixed, tiled 8 bits
Display Size	Fit, full frame, real, x2
Frame Rate	The frame rate is converted and displayed using the internal sync signal.
Aspect Marker Display	
HD-SDI	4:3, 13:9, 14:9, 2.39:1
SD-SDI Aspect Marker Format	13:9, 14:9, 16:9 Line, shadow (99 levels), black
Safety Marker Size	ARIB TR-B4, SMPTE ST RP-218, user-defined
Line Select	Marks the selected line
AFD Display	Displays abbreviations for SMPTE ST 2016 stan- dard AFD codes
Gamut Error Display	Displays gamut error locations over the picture
Superimpose	Displays closed captions over the picture *1
Standard Supported	EIA-708, EIA/CEA-608-B (EIA-708-B) SMPTE ST 334,
	EIA/CEA-608-B (EIA/CEA-608-B) SMPTE ST 334,
	VBI (EIA/CEA-608-B Line 21) CIA/EIA-608-B
CINELITE II Display	Displays the luminance information on the picture display
Thumbnail Display	Video signal waveform, audio level meter(when an
	LV 5770SER41/43 is installed)
	*1 The closed caption display is not supported

## LV 5770SER09 only

Eye Pattern Display Display 3G-SDI, HD-SDI, SD-SDI HD Dual Link Method Cursor Measurement Automatic Measurement Items	Displays the input SDI waveform before equalizing Displays channel A or B, whichever is selected Displays link A or B, whichever is selected Equivalent time sampling Amplitude measurement using Y cursors Time measurement using X cursors Rise time and fall time measurement using the TrTf cursor Eye pattern's amplitude Rise time (the time for the signal to rise from 20 to 80 % of its amplitude) Fall time (the time for the signal to fall from 80 to 20 % of its amplitude) Timing jitter
Jitter Display Display 3G-SDI, HD-SDI, SD-SDI HD Dual Link Method Cursor Measurement Automatic Measurement Dis	Displays the jitter component of an SDI signal Displays channel A or B, whichever is selected Displays link A or B, whichever is selected Phase detection method Jitter value measurement through the use of cursors splay Feature Displays the jitter value in seconds (sec) and unit intervals (UI)
Eye Pattern and Jitter Detect Error Detection Error Threshold Settings Event Log Threshold Values	tion On or off per item Can be set individually for 3G-SDI, HD-SDI, and SD-SDI signals Stores eye patterns and jitter errors 100 % of the values in the SMPTE standard

### LV 5770SER42 ANALOG AUDIO

## **FEATURES**

#### • Digital Audio I/O

The addition of the analog audio option enables the LV 5770 to display analog audio. The LV 5770SER42 is equipped with an output connector, and this option can also be used to generate the analog audio that corresponds to the audio signal displayed on the screen. (This option requires the LV 5770SER41/43.)

## **SPECIFICATIONS**

Audio Input/Output			
I/O Connectors	37-pin D-sub (female)		
Input Signal Format	DC-coupled balanced input		
Number of Input Channels	8 (4 stereo pairs)		
Input Impedance	≥ 20 kΩ		
Output Signal Format	DC-coupled balanced output		
Number of Output Channels	8		
Output Impedance	50 Ω (nominal)		
Output Signal	8-channel audio signal that is displayed on the		
	screen		
	(Dolby*—available as a special order—signals are		
	decoded and generated as analog signals.)		
Maximum Output Level	100 kΩ load 24 dBu		
	600 Ω load 4 dBu		

Headphone Output Jack (LV 5770SER41 option)	
Output Connector	One stereo jack
Analog Audio Display	
Input Signal	Analog audio input
Displayed Channels	Up to 8 channels (4 stereo pairs)
Display Type	Level meter, Lissajous, surround, Status, Loudness
Level Meter Display	
Displayed Channels	Two or eight
Dynamic Range	-60 dBFS / -90 dBFS
Meter Response Mode	TRUE PEAK, PPM type I, PPM type II, VU
Peak Hold Response Mode	TRUE PEAK, PPM type I, PPM type II
Peak Hold Time	0.5 to 5.0 s (in 0.5 s steps), HOLD
Level Setting	Reference level, warning level, over level (-40.0 to
	0.0 dBFS for each level)
Lissajous Display	
Lissajous Display	The same as digital audio
Surround Display	The same as digital audio
Loudness Display	The same as digital audio
	*The LV 5770SER41 is required for the LV
	5770SER42 to operate.
Accessories	
	37-pin D-sub connector1
	37-pin D-sub connector cover1
	Cable2

### LV 5770SER03A TRI SYNC / COMPOSITE

## **FEATURES**

The addition of the analog composite input option enables the LV 5770 to display the video signal waveforms of NTSC, PAL, and HD tri-level sync signals, display vectors (NTSC and PAL only), measure SCH (NTSC and PAL only), and measure phase differences against external signals.

(For phase difference measurement, an external sync signal that is synchronized and of the same format as the input signal is necessary.)

### Display Example

Tri sync display

## **SPECIFICATIONS**

NTSC or PAL composite video signal SMPTE ST 170, ITU-R BT.470, SMPTE ST 274	
2 BNC connectors (channels A and B are selectable)	
1 BNC connector	
Channel A or B-whichever is selected-of the com-	
posite option, the active signal	
External Sync Signal Input Connectors	
1 pair of BNC connectors	
Tri-level sync or NTSC/PAL black burst signal	
15 kΩ passive loop-through	
* If the video signal waveform is displayed using an exter-	
nal sync signal as the reference, inserting or removing	
an composite signal or restarting the device may cause	
the waveform phase to be off by two clock.	

Waveform Display	
Waveform Operations	
Line Select	Displays the selected line
Sweep Modes	H and V
Vertical Axis	
IRE Scale (NTSC)	-40 to 100 IRE
V Scale (PAL)	-0.3 to 0.7 V
Horizontal Axis	
Operation Mode	1-waveform display
Display Format	
Line Display	1H, 2H
Cursor Measurement	
Horizontal Cursors	2 (REF and DELTA)
Time Measurement	Second display
Vertical Cursors	2 (REF and DELTA)
Amplitude Measurement	V or % display
Vectorscope Display	
Scale	
Color Bar Saturation	75 %, 100 % (color bar)
IQ Axis	Show, hide
Display Colors	Seven colors to choose from
Setup (NTSC)	0 %, 7.5 %
NTSC Display (PAL)	NTSC display, PAL display
SCH Display	The SCH value is displayed as a digital value.
Picture Display	
Quantization	8 bits
Display Size	Fit, full frame, real
Frame Rate	The frame rate is converted and displayed using the
	internal sync signal.
Aspect Marker Display	16:9, 14:9, 13:9
Aspect Marker Format	Line, shadow (99 levels), black
Safety Marker Size	SMPTE ST RP-218, user-defined
Analog Composite Signal Stat	us Display Phase Difference Display
Function	Displays the phase difference between a reference
	signal and an input signal both numerically and
	graphically
Reference Signal	NTSC/PAL black burst signal
	HD tri-level sync signal
	(The same format as the input signal)
* When an LV/57709ED/11//2 is in	

When an LV5770SER41/43 is installed
