- Launch: July 2021

New product GPS / BDS compatible option released

Leader Electronics (President: Kozo Nagao) releases GPS / BDS compatible option LT4610SER04 (hardware) in the option lineup of the sync generator LT4610 / LT4611.

BDS is a GNSS (Global Navigation Satellite System) consisting of satellites launched by China and is a positioning system that is attracting attention because it can provide services all over the world.

By using the GNSS antenna, GPS and BDS radio waves can be used as reference signals. The BDS compatible function has been added to the existing GPS compatible option LT4610SER01 with time code input / output, CW input / output, and LTC input / output features.
